

Tile paving machine

Opis Produktu

The vibrating suction cup is used for lifting, moving, and laying even large and heavy ceramic tiles, as well as stone tiles, which can be difficult to move manually. In addition, the device, thanks to vibrations, evenly and precisely spreads the adhesive during installation. The vacuum suction cup can prevent cracks or scratches associated with traditional tile laying and leveling. Furthermore, the tool increases work efficiency, as it allows for moving and gluing various wall claddings in a shorter time, without much physical effort.

The tool is simple and intuitive to use. The rubber suction cup operates on the principle of vacuum created by a manual lever, allowing it to adhere firmly and permanently to tiles weighing up to 60 kg. Electronic vibration strength adjustment, up to 12 levels, allows for customization to specific needs and working conditions. Safety systems minimize the risk of tile drop during transport.

Charakterystyka

- Maximum load - 60 kg;
- Maximum tile size - 30 x 120 cm;
- Suction cup diameter - 123 mm;
- Vibration frequency - 3,500-8,500 rpm;
- Vibration levels - 12;
- Power supply - 20 V, 2 Ah battery;
- Set includes - vibrating suction cup, battery, charger.
